

WHEN SHOULD I PLANT THIS?

Vegetable Planning and Planting

EARLY SPRING

Cool-season vegetables grow best when temperatures range between 40 degrees F and 75 degrees F. These crops often are those that develop edible roots, stems, leaves, or buds, such as potatoes, broccoli, and spinach.

BROCCOLI
BEANS (MID SEASON)
CARROTS
CABBAGE
CAULIFLOWER
KALE
LETTUCE
ONION
POTATOES
PARSNIPS
RHUBARB

LATE SPRING

Warm-season vegetables: these tender crops are killed by frost and won't perform well if temperatures drop below 50 degrees F. Don't plant before the soil and air temperatures have warmed up in spring or early summer because the seeds and plants simply won't grow
